

## Best Coverage

Why rely on a single cellular network?

iMetrik devices interface with multiple networks. This means our devices switch over the air to determine and use the strongest network in the area of your asset.

*We locate when others can't.*

## Best Value

Value in the GPS tracking business is derived from a combination of quality and total cost of ownership.

Our devices are built for the long haul, can be reused, and carry no renewal fees.

*Absolutely NO renewal fees.*

## Best Support

Unlike other “manufacturers” iMetrik builds the devices it sells.

You're making a large investment in complex machines operating on complicated networks.

*Get support from the people that make the device AND manage the network.*
